

Introducing CIAS

Cencon IVR Automation System

CIAS integrates with the Cencon and Centran software to provide automation that eliminates the need for manual resources to issue and retrieve open and close codes from crews.

This delivers a more secure, robust and lower cost solution than the current manual method of issuing codes to crews by operators.

CIAS reduces operational costs for organisations providing ATM outsourcing services to financial institutions, retailers and independent ATM network providers.

Whether you are currently using the Kaba Cencon lock or looking to implement it across your network, we would welcome the opportunity to demonstrate the value of CIAS to your business.

Features

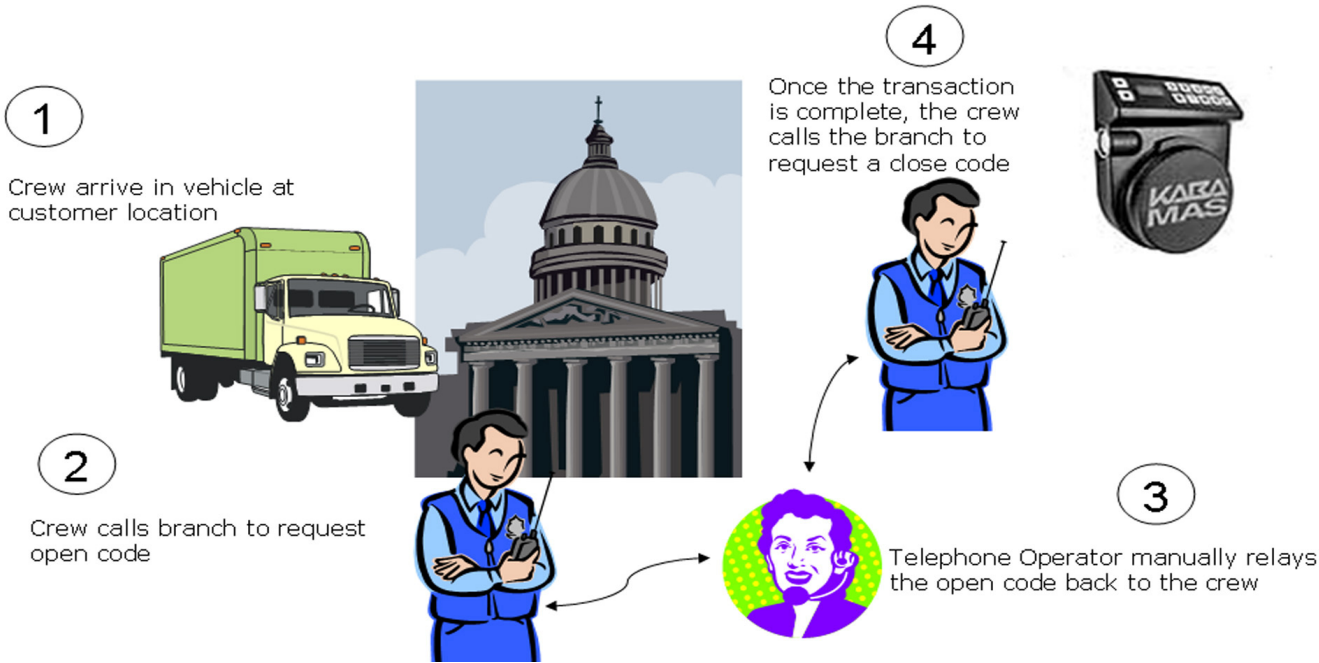

- ◆ Automated over-the-phone issue of 'open lock codes' and 'close seal codes'
- ◆ Complete Route Management System
- ◆ System alerts for access breaches
- ◆ Supports 'Route' and 'FLM' modes
- ◆ Easy to use administration interface for vehicle, route and user set-up
- ◆ Restricts access of crew to only authorized routes and locks
- ◆ Allows quick transfer of work plan to substitute crews in event of break-down
- ◆ Full reports package
- ◆ Resilient architecture options
- ◆ Multiple languages
- ◆ Full training and support
- ◆ And much more.....
